

# Dual-purpose solar water pump inverter package

### What is solar pump inverter?

What is Solar Pump Inverter? Hober Solar Pump Inverter is convert DC from the solar array into AC, which in turn powers your AC water pump. According to the sunlight intensity, Adjust the output frequency in real time. get the maximum power point tracking (MPPT) and maximize the use of solar energy.

## Can a solar inverter drive a water pump?

Let's explore them. Three solar inverters can drive a water pumpand convert photovoltaic direct current into alternating current. It is an inverter designed for running water pumps using solar power. It directly transforms the direct power produced by solar panels into an alternating current to drive the pump.

#### How to choose a solar pump inverter?

Understand the rated power of the water pump. Normally, the rated power of the solar pump inverter should be slightly more than or equal to the rated power of the water pump to ensure that the pump can be operated normally. For instance, if the water pump's rated power is 2kW, the selected inverter should have a rated power of 2kW or higher.

### What is a DC & AC solar pump inverter?

Our inverters are known for advanced tech and lasting durability. They convert DC to AC, driving AC water pumps. With both solar and grid power input options, they adjust frequency based on sunlight, ensuring optimal power use through real-time MPPT. Experience the best of solar energy with Hober. What Are DC&AC Solar Pump Inverter Used For?

#### How does a solar inverter work?

A solar inverter changes the DC power from the solar panels into AC power, so you can use it to run things, like water pumps. Some inverters also change the voltage and make the power flow better. This is very important for solar water systems because it helps keep the water pumping even when the sun isn't shining as much.

#### What rated power should a water pump inverter have?

For instance, if the water pump's rated power is 2kW, the selected inverter should have a rated power of 2kW or higher. If more system expansion is required, choose an inverter with a slightly higher rated power so that you don't need to replace it when the load is maximum.

They"re especially useful for irrigation or remote water needs. But to make solar power usable for these water pumps, you"ll need a specialized inverter. This guide will explain what a solar ...
