

## Energy storage box temperature control system design

What is container energy storage temperature control system?

The proposed container energy storage temperature control system integrates the vapor compression refrigeration cycle, the vapor pump heat pipe cycle and the low condensing temperature heat pump cycle, adopts variable frequency, variable volume and variable pressure ratio compressor, and the system is simple and reliable in mode switching.

Do cooling and heating conditions affect energy storage temperature control systems?

An energy storage temperature control system is proposed. The effect of different cooling and heating conditions on the proposed system was investigated. An experimental rig was constructed and the results were compared to a conventional temperature control system.

What is the COP of a container energy storage temperature control system?

It is found that the COP of the proposed temperature control system reaches 3.3. With the decrease of outdoor temperature, the COP of the proposed container energy storage temperature control system gradually increases, and the COP difference with conventional air conditioning gradually increases.

What is a sensible heat storage system?

Sensible heat storage involves storing thermal energy by altering the temperature of the storage medium. In a latent heat storage system, heat is released or absorbed during phase changes within the storage medium.

What are the temperature control requirements for container energy storage batteries?

In view of the temperature control requirements for charging/discharging of container energy storage batteries, the outdoor temperature of 45 ° C and the water inlet temperature of 18 ° Cwere selected as the rated/standard operating condition points.

What is a composite cooling system for energy storage containers?

Fig. 1 (a) shows the schematic diagram of the proposed composite cooling system for energy storage containers. The liquid cooling system conveys the low temperature coolant to the cold plate of the battery through the water pump to absorb the heat of the energy storage battery during the charging/discharging process.
