Lithium battery pack discharge board

How to choose a lithium battery protection board?

Safety is one of the most important considerations when choosing a lithium battery protection board. The safety of the protection board is not only related to the lifespan and efficiency of the battery but also to the well-being of the users. To guarantee the safety of the protection board, they must undergo a battery of safety certifications.

Why do lithium batteries need a PCB board?

This boom brings with it the necessity for reliable protection circuits, ensuring that lithium batteries are safe, efficient, and durable. One key component in this protection system is the battery PCB (Printed Circuit Board) board, which plays a crucial role in the operation and safety of lithium batteries.

Do lithium batteries need protection?

Lithium batteries are great, but they need protection. In order to ensure the safety of use, there are many requirements: Basic protection requirements: over-charge protection, over-discharge protection.

Can you get a Protection Board with a custom battery pack?

You can also obtain custom-built protection boardswith your custom battery packs. This arrangement is ideal since the battery manufacturer will have a greater understanding of the protection needs of the custom pack that they design for the customer. So,the protection board would cater to these design requirements.

What is a lithium battery protection circuit?

The protection circuit ensures the voltage does not exceed the safe limits set by the manufacturer. For example, a common lithium-ion battery operates between 3.0V and 4.2V per cell. Exceeding these limits can lead to serious safety risks like overheating, leakage, or even fires. A typical lithium battery protection circuit includes:

Can a lithium battery be charged with a lead-acid battery charger?

Lithium battery should be charged with lithium battery special charger, do not use lead-acid battery charger, lead-acid charging may have high voltage breakdown protection board MOS tube, resulting in protection board overcharge is not protected. Use your battery pack number *4.2V This is the charging voltage of the non-ferrous lithium battery.

2S 3A Li-ion Lithium Battery 7.4V 8.4V 18650 Charger Protection Board Module is a small PCB mounted Li-ion Lithium Battery charger protection module. This small and smart battery ...

With overcharge, over discharge, over current, short circuit and other protection functions, for a variety of shapes of various shapes 3.7V lithium battery. High quality MOSFETs such as ...
