### **New Energy Battery Cabinet Signage**

Where should a battery system sign be mounted?

This sign shall be mounted either adjacent to the enclosure or on all doors to the room where the battery system is located. Work health and safety (WHS) regulations may require signs indicating the need for personal protective equipment (PPE).

#### What is a battery hazard sign?

The sign shall specify the specific fault condition (e.g. fire) under which the fumes will be present. This sign shall also include PPE requirements for entering the room/working with the battery systems. This sign shall be mounted either adjacent to the enclosure or on all doors to the room where the battery system is located.

#### Where should a voltage & current sign be mounted?

A sign stating voltage and current shall be mounted either adjacent to the enclosure or on all doors to the battery system or BESS room. (a) The words "Battery System" or "Battery Energy Storage System". (b) Short-circuit current (specify current in amperes). (i) Only one sign is required if the battery systems are all in the same room/enclosure.

#### What is the Australian standard for battery grid connect systems signage?

The most commonly referenced Australian standard applicable to battery grid connect systems signage is AS/NZS 5139:2019which breaks battery systems into three different categories.

#### What is the minimum size of a battery hazard sign?

All battery system types categorized as explosive gas hazards shall have a "Danger,Risk of Battery Explosion" sign installed in a prominent position when approaching the battery system. The minimum size of this sign shall be 175 mm x 175 mm. All battery system types categorized as toxic fume hazard shall have a sign: "Danger,toxic fumes".

A maintenance technician walks into a battery storage facility, spots a bright yellow triangle with a lightning bolt, and instantly knows - " High voltage. Proceed with caution. " That"s ...
