

## Power consumption of solar base stations

Can a base station power system model be improved?

An improved base station power system modelis proposed in this paper, which takes into consideration the behavior of converters. And through this, a multi-faceted assessment criterion that considers both economic and ecological factors is established.

Can a base station power system be optimized according to local conditions?

The optimization of PV and ESS setup according to local conditions has a direct impact on the economic and ecological benefits of the base station power system. An improved base station power system model is proposed in this paper, which takes into consideration the behavior of converters.

Can distributed photovoltaic and energy storage systems reduce energy consumption?

Numerous studies have affirmed that the incorporation of distributed photovoltaic (PV) and energy storage systems (ESS) is an effective measure to reduce energy consumption from the utility grid.

Do 5G base stations consume more energy?

However, the widespread deployment of 5G base stations has led to increased energy consumption. Individual 5G base stations require 3-4 times more power than fourth-generation mobile communication technology (4G) base stations, and their deployment density is 4-5 times that of 4G base stations [3,4].

What happens if PV capacity is less than base station load?

When the installed PV capacity is less than the base station's daily load, the return on investment of PVs remains relatively stable, but it gradually decreases as the installed PV capacity increases. The return on investment of adding ESS is consistently lower than that of PVs, but its trend is different.

Does converter behavior affect base station power supply systems?

The influence of converter behavior in base station power supply systems is considered from economic and ecological perspectives in this paper, and an optimal capacity planning of PV and ESS is established. Comparative analyses were conducted for three different PV access schemes and two different climate conditions.
