

The role of liquid-cooled energy storage in Germany

Why should Germany use energy storage systems?

Germany is under increasing pressure to rapidly decarbonize its electricity system, while ensuring a secure and affordable electricity supply. In this context, energy storage systems (ESSs) can play a crucial role in enabling a high share of variable renewable electricity generation.

What is the difference between power to gas/liquid systems and thermal storage systems?

The power to gas/liquid systems use hydrogen or synthetic gas as storage medium. The thermal storage systems relates to all types of systems where heat/cold is transformed into cold/heat respectively, for example in order to store heat generated by solar plants for later use.

Can pumped hydro storage be a key component of Germany's electricity system?

The study by Keles and Yilmaz, for instance, considers only the option of pumped hydro storage (PHS), as it is already a key component of the German electricity system. Others consider multiple technology options, with Bartholdsen et al., for instance, considering also lithium-ion batteries and hydrogen storage (via power-to-gas).

Are liquid cooled battery energy storage systems better than air cooled?

Liquid-cooled battery energy storage systems provide better protection against thermal runawaythan air-cooled systems. "If you have a thermal runaway of a cell, you've got this massive heat sink for the energy be sucked away into. The liquid is an extra layer of protection," Bradshaw says.

How does a storage system affect electricity consumption?

As a consequence, the electricity stored into the storage system is subject to several levies and taxes which are imposed on the consumption of electricity. Since the final recipient of the electricity, which has been fed from the storage system into the grid, is also a consumer, it has to pay the same levies and taxes again.

What are the benefits of a liquid cooled storage container?

The reduced size of the liquid-cooled storage container has many beneficial ripple effects. For example, reduced size translates into easier, more efficient, and lower-cost installations. "You can deliver your battery unit fully populated on a big truck. That means you don't have to load the battery modules on-site," Bradshaw says.

Chinese battery supplier Gotion High-Tech officially launched localized production of its 5MWh liquid-cooled energy storage system--branded as Gotion GRID--at its facility in Göttingen, ...

The implications of technology choice are particularly stark when comparing traditional air-cooled energy storage systems and liquid-cooled alternatives, such as the PowerTitan series of ...
