

## There is a company in Mongolia that makes battery cabinets

#### Could Mongolia become a battery manufacturing hub?

"Mongolia has lithium assets, Mongolia is building manufacturing facilities, the University of Science and Technology is well-versed in hydrogeology - a joint venture between the public and private sectors could put this manufacturing capability in Mongolia," Haji says - envisioning a greater role for the country in the global battery supply chain.

#### How to dispose of used Li-ion batteries in Mongolia?

But the preferred option for used Li-ion batteries is recyclingor disposal. In Mongolia, Li-ion batteries are classified as hazardous. As appropriate recycling facilities are not available in many developing countries, battery suppliers tend to be responsible for the recycling or disposal of battery cells.

#### Can Mongolia adopt a financial revenue model like Australia?

Combined with the establishment of energy and Frequency Control Ancillary Services (FCAS) markets, the policy and guidelines would enable Mongolia to adopt financial revenue models like those used in Australia.

#### Could Mongolia's Bess project earn financial revenues?

Mongolia's BESS project could consider earning financial revenues, as is done in Australia. However, this is not currently feasible, as Mongolia does not ofer similar market conditions and mechanisms. Its energy sector uses a single-buyer model in which the NDC is the single of-taker.

#### Is Mongolia's first lithium brine explorer?

Enter ION Energy, Mongolia's first lithium brine explorer. The company (listed on Canada's TSX Venture Exchange) has a license to explore lithium reserves in Sukhbaatar aimag and aims to export high-quality lithium into the burgeoning battery metals Asian market, which would put Mongolia at the forefront of the electric transport revolution.

### Is Mongolia a coal-dependent country?

Coal-dependent energy system. As of end 2021, Mongolia had 1,549 megawatts (MW) of installed power generation capacity. The country's energy mix included coal-fired combined heat and power (CHP) plants totaling 1,269 MW (81.9%), renewable energy sources totaling 271.2 MW (17.5%), and diesel power sources totaling 8.6 MW (0.6%).
