

# What inverter should be used for rural photovoltaic

What are the different types of solar power inverters?

There are four main types of solar power inverters: Also known as a central inverter. Smaller solar arrays may use a standard string inverter. When they do, a string of solar panels forms a circuit where DC energy flows from each panel into a wiring harness that connects them all to a single inverter.

## How do I choose the right solar inverter?

To find the right solar inverter or inverters for your installation, you must consider several specific features of your property, including your energy demand, roof complexity, and whether shading will affect your system's performance. Learn more about solar and shade.

#### What size solar inverter do I Need?

A 4.5 kW array (or ten 450-watt solar panels) would just about cover your consumption. The type of solar panels you choose can also impact the size of the inverter you need. Different types of solar panels have different wattage ratings and efficiency levels. The three main types of solar panels are monocrystalline, polycrystalline, and thin film.

## Why are solar inverters important?

When people think about a solar energy system, solar panels are usually one of the first things that come to mind. While solar panels are undeniably important, solar inverters are an equally crucial system component--especially when it comes to creating sustainable energy solutions in homes and buildings around the world.

#### What is a solar power inverter?

A solar power inverter is an essential element of a photovoltaic system that makes electricity produced by solar panels usable in the home. It is responsible for converting the direct current (DC) output produced by solar panels into alternating current (AC) that can be used by household appliances and can be fed back into the electrical grid.

#### Can I add solar panels later with a microinverter?

While it's easier add solar panels to your system later with microinverters, choosing the right string inverter before your installation is critical, as central inverter systems are typically built-to-suit without the capacity for expanded solar generation. Use our online tool to find the right sizes for your solar energy system components.
