

Africa has sufficient supply of lithium batteries for energy storage

Are lithium-ion batteries a viable energy source in Africa?

Although Africa is rich in renewable resources, their use remains limited. Implementing electrochemical energy conversion and storage (EECS) technologies such as lithium-ion batteries (LIBs) and ceramic fuel cells (CFCs) can facilitate the transition to a clean energy future.

Why is a lithium supply chain important in Africa?

Understanding of lithium supply, demand and markets is essential for development of the Li supply chain in Africa. Energy security. Lithium mineral processing is highly energy intensive, and so secure energy supplies are essential for industrial engagement in the lithium supply chain.

How much money do African countries need to produce lithium batteries?

The required capital expenditure ranges from USD 0.5-1.5 billion. African countries could refine materials for lithium battery production and export to the US and EU. Refining could be in countries that are currently mining raw materials required for battery cell production or have a plan to start by 2030. These include: 4.

Can Africa develop an integrated lithium supply chain for batteries?

In this report, we summarise the potential for developing an integrated lithium supply chain for batteries in Africa. Lithium is a moderately abundant element in the Earth's crust, and is predominantly concentrated into three types of mineral deposit: pegmatites and granites; sedimentary deposits; and brines (Bowell et al., 2020).

Could African countries refine materials for lithium battery production & export?

African countries could refine materials for lithium battery production and export to the US and EU. Refining could be in countries that are currently mining raw materials required for battery cell production or have a plan to start by 2030. These include: 4. Presence of local battery demand or assembly 5. Presence of required talent 6.

Which African countries have lithium resources?

This report reviews known resources of lithium, and engagement in the battery supply chain, across key African countries. Many African countries (most notably Zimbabwe, Namibia, Ghana, Democratic Republic of Congo and Mali) have lithium resources and the potential for lithium mines.

Africa has sufficient supply of lithium batteries for energy storage
