

Australian hydropower energy storage project investment

Should Australia invest in pumped storage hydropower?

The report highlights the urgent need for a co-ordinated national policy framework and hydropower roadmap to accelerate investment in pumped storage hydropower (PSH), a technology critical to Australia's long-duration energy storage and net zero ambitions.

What are the new hydro energy projects in Australia?

New projects including Kidston Pumped Hydro (QLD) - the first Pumped Hydro Energy Storage System in 37 years - Borumba Pumped Hydro Energy Project (QLD), Snowy 2.0 (NSW) and Tarraleah (Tas) are currently in the pipeline and will see the number of connected schemes grow along with the total percentage of electricity generated.

How pumped hydro energy storage is driving Australia's energy transition?

How pumped hydro energy storage is driving Australia's energy transition designed to improve grid stability and sustainability. Pumped Hydro Energy Storage is a vital technology driving Australia's energy transition, offering a proven and reliable solution for storing excess energy and delivering power on demand.

How much will hydropower storage capacity increase by 2030?

With more than 100 projects in the pipeline, IHA estimates that pumped hydropower storage capacity is expected to increase by almost 50%- to about 240 GW by 2030. In terms of energy storage capacity, IRENA estimates that pumped hydro storage capacity will increase by 1,560-2,340 GWh above 2017 levels by 2030.

Can pumped hydro power Australia's 82 per cent renewables target?

Still, the ability of such plants to work as a giant water battery - but with typically larger capacity and with more storage than chemical batteries - means many regard pumped hydro as critical to help Australia reach its target of 82 per cent renewables by 2030 and to help replace baseload coal power.

Are pumped hydro energy storage projects coming to Kidston?

Following the procurement and contractual close of the Kidston Pumped Hydro Project and Snowy 2.0, multiple pumped hydro energy storage projects have been announced, and are in the early stages of planning and procurement.
