

Can shared energy storage be used in industrial parks?

2. Literature review With the emergence of ESS sharing , shared energy storage (SES) in industrial parks has become the subject of much research. S&#230;ther et al. developed a trading model with peer-to-peer (P2P) trading and SES coexisting for buildings with different consumption characteristics in industrial areas.

What is the optimal ESS-sharing scheme in an industrial park?

In the industrial park environment, ESS sharing has multiple schemes that involve different ESS installation structures and energy-sharing methods. Therefore, this study determines the optimal ESS-sharing scheme in an industrial park through the construction of load optimization model and comparative analysis.

Why is energy storage system installation important?

Although energy storage system (ESS) installation is an effective means of addressing the uncertainty problem of RESs and load demand ,,,guaranteeing the stable and efficient operation of the industrial park's power system,cost inefficiency remains the main factor restricting ESS development .

Do industrial parks use a lot of electricity?

Unlike commercial and residential areas,industrial parks incorporate various power-consuming entities ,,. The total electricity load in these parks is large and variable,and the daily peak and valley electricity consumption are notably distinct ,,.

Are industrial parks a multi-microgrid system?

Many electricity users in industrial parks are equipped with DGs,which can be regarded as multiple microgrids. The entire industrial park can be viewed as a multi-microgrid system. The microgrid is a small power generation and distribution system that uses controllable DGs to supply power to regional loads based on load demand in a limited area.

Are industrial parks a key area for future smart grid construction?

Industrial parks are one of the key areas for future smart grid construction. As distributed generations (DGs) continue to be developed ,,industrial park advancement now prioritizes low-carbon energy conservation in addition to meeting industrial needs ,,.

In this study, the key factors influencing the deployment and benefits of HESSs were investigated. Suitable industrial park scenarios for HESS deployment, along with choices of energy storage ...
