

Solar panel project capacity utilization rate

What is the capacity utilization factor of a solar power plant?

The capacity utilization factor (CUF) of a solar power plant depends on several factors: The amount of solar irradiation available at the plant site is a key factor affecting CUF. Solar irradiation levels depend on the location and can vary significantly between regions and seasons.

What is the capacity utilisation factor (CUF) for a solar photovoltaic project?

The capacity utilisation factor (CUF) for a solar photovoltaic (SPV) project is the ratio of the actual energy generated by the SPV project over the course of the year to the equivalent energy output at its rated capacity over the same time period.

What is the capacity factor of solar power?

Solar power's capacity factor is ~24-26% per the EIA. The capacity factor of a solar project is heavily influenced by the availability of sunlight. This translates to seeing a high percentage of installed US solar projects concentrated in the southwest US where sunlight availability isn't an issue.

How much did solar power cost in 2023?

Key findings from this year's report include: 18.5 GW AC of new utility-scale PV capacity came online in 2023, bringing cumulative installed capacity to more than 80.2 GW AC across 47 states. Installed costs continued to fall in 2023. Relative to 2022, capacity-weighted averages decreased by 8% to \$1.43/W AC (or \$1.08/W DC).

How much energy does a solar plant produce a year?

In this example, the solar plant operated at a CUF of 18.3% over the year. This means it produced 18.3% of the maximum possible energy it could have produced if it operated at its full 10 MW capacity continuously over the entire year.

How much CUF does a 10 MW solar power plant generate?

For example, if a 10 MW solar power plant generates 16,000,000 kWh of electricity over a year with 8760 hours, the CUF calculation would be: In this example, the solar plant operated at a CUF of 18.3% over the year.

The project-specific tariff will apply to solar projects, floating solar projects, solar thermal, wind, and biogas power projects. It will also apply to municipal solid waste projects, ...
