

# Thin-film photovoltaic module current classification

Thin-film solar cells are a type of solar cell made by depositing one or more thin layers (thin films or TFs) of photovoltaic material onto a substrate, such as glass, plastic or metal. Thin-film solar cells are typically a few nanometers (nm) to a few microns (um) thick-much thinner than the wafers used in conventional crystalline silicon (c-Si) based solar cells, which can be up to 200 um thick. Thi...

Ultimately, by examining the intricate interplay between photovoltaic materials and panel design, this review aspires to equip researchers, engineers, and policymakers with a comprehensive ...
