How many mobile phone base stations are there in the UK?

Below the level of the major telecommunications towers, mobile phone operators run roughly 23,000 base stations. In urban areas, these are almost all rooftop sites or microcells, but in rural areas these are often on towers, frequently owned by BT or Arqiva. The Sitefinder database is an incomplete list of mobile phone base stations in the UK.

How do base stations work?

Base stations transmit and receive radio waves to connect the users of mobile phones and other devices to mobile communications networks. The strength of the radio waves from base station antennas reduces rapidly with increasing distance and the levels at locations where the public can be exposed tend to be small.

What is a mobile phone base station?

Public exposure levels Mobile phone base stations are radio transmitters with antennas mounted on either freestanding masts or on buildings. Radio signals are fed through cables to the antennas and then launched as radio waves into the area, or cell, around the base station.

How many transmitters does a base station have?

Base stations in busier areas may have up to ten or more transmitters connected to their antennas, allowing them to transmit on several frequencies at the same time, and to handle communications with many mobile phones.

How does a base station transmitter work?

The power of each base station transmitter is set to a level that allows a mobile phone to be used within the area for which the base station is designed to provide coverage, but not outside the coverage area. Higher powers are needed to cover larger cells and also to cover cells with difficult ground terrain.

How do telecom towers work?

Telecom towers, also known as cell towers or mobile phone masts, are crucial components of the mobile telecommunications network. They work by hosting the equipment necessary to transmit and receive radio signals from mobile devices, enabling voice, text and data communication. Here's a simplified overview of how telecom towers work:
