How to calculate inverter size?

Using the Inverter Size Calculator is quick and easy. You'll need three inputs: Total Wattage (W): This is the total power consumption of all the appliances or devices you plan to run through the inverter. Safety Factor: A multiplier to ensure some buffer above your actual power requirement. Typically ranges from 1.1 to 1.5.

What size inverter do I Need?

You need an inverter rated for at least 1694.12 W, which you should round up to the next available size (e.g., 1800 W inverter). What Is a Safety Factor? The safety factor accounts for unexpected power spikes or additional appliances being connected. It's a good practice to oversize the inverter slightly to ensure long-term reliability.
