

# What size solar panel should I use for a 12v 180 watt water pump inverter

How much wattage does a solar water pump need?

Let's say you want to pump water from a depth of 50 feet at a rate of 5 GPM using a 12V pump that is 70% efficient. The region receives an average of 6 hours of sunlight per day, and you want to use a 12V solar panel and battery. Using the Solar Water Pump Sizing Calculator, the minimum solar panel wattage required is calculated as follows:

What is a solar water pump sizing calculator?

The Solar Water Pump Sizing Calculator is an essential tool for individuals who rely on solar power to pump water. By providing the required input data, users can accurately calculate the minimum solar panel wattage and battery capacity required to meet their water pumping needs.

How many watts a solar panel to charge a 12V battery?

You need around 400-550 wattsof solar panels to charge most of the 12V lithium (LiFePO4) batteries from 100% depth of discharge in 6 peak sun hours with an MPPT charge controller. What Size Solar Panel To Charge 24v Battery?

What is the minimum battery capacity required for a solar water pump?

The minimum battery capacity required to store the energy generated by the solar panel can be calculated as follows:  $\text{Battery Capacity} = (2.34 \times 6) / 12 = 1.17$  Therefore, the minimum battery capacity required is 1.17 Ah. The Solar Water Pump Sizing Calculator is an essential tool for individuals who rely on solar power to pump water.

How many watts of solar panels do I Need?

You need around 800-1000 wattsof solar panels to charge most of the 48V lead-acid batteries from 50% depth of discharge in 6 peak sun hours with an MPPT charge controller. You need around 1600-2000 watts of solar panels to charge most of the 48V lithium batteries from 100% depth of discharge in 6 peak sun hours with an MPPT charge controller.

What is a solar panel wattage & battery capacity?

**Battery Voltage:** The voltage rating of the battery, which can be 12V, 24V, or 48V. The calculator outputs two values: **Solar Panel Wattage:** The minimum wattage of the solar panel required to operate the water pump. **Battery Capacity:** The minimum battery capacity required to store the energy generated by the solar panel.

## What size solar panel should I use for a 12v 180 watt water pump inverter
